Dear Mr. Lavinder

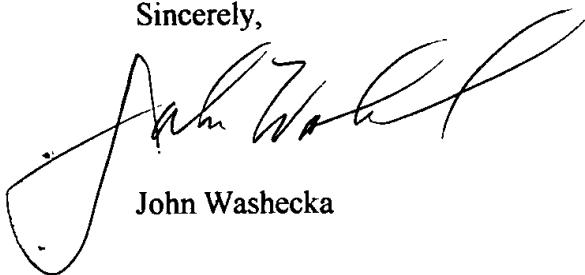

In my original application I used net material for the vertical sides connecting the top and bottom panels. My application needed additional drawings and I submitted revised drawings with the issue fee in February 1996. So far I have not heard if these revised drawing were acceptable or needed additional work..

I contacted a plastic manufacturing company and they suggested replacing the net material with series of plastic rings that would maintain the unique shape of the original patent and would collapse into the top and bottom panels.

An engineer has started new drawings using the plastic rings.

If it is possible I would like to revise my original application and substitute these collapsing plastic rings, wherever the net material was stated. Please advise.

Sincerely,

John Washecka
